Program Manager Student – Windows Cyber Defense

Location: Herzeliya

Cyber-attacks are rising in volume and sophistication, easily evading traditional defenses like signature based anti-virus software and rendering enterprises more vulnerable. The Microsoft Windows Cyber Defense team is working to change this reality by making the next version of Windows 10 the most trusted and secure OS. We are enabling Windows to actively identify, resist and respond to advanced cyber threats, leveraging a combination of endpoint sensors and Cloud-based Big Data security analytics to get the job done.

If you have passion for data science, and curiosity to discover and evaluate hidden patterns and produce knowledge out of mostly untapped large and complex data sets, look no further.

Requirements:

- Student for B.Sc. /M.Sc. or Ph.D. degree in a Computer Science or similar discipline
- Excellent English and Hebrew
- Excellent communication skills
- Must have the ability to think strategically as well as break down complex problems
- Expected to act with independent judgment and self-initiative
- Practical experience using statistical analysis techniques and building advanced predictive models
