

MATLAB for Image Processing

CS638-1 TA: Tuo Wang

tuowang@cs.wisc.edu

Feb 12th, 2010

Outline

- **Introduction to MATLAB**
 - **Basics & Examples**
- **Image Processing with MATLAB**
 - **Basics & Examples**

What is MATLAB?

- MATLAB = Matrix Laboratory
- “MATLAB is a high-level language and interactive environment that enables you to perform computationally intensive tasks faster than with traditional programming languages such as C, C++ and Fortran.”
(www.mathworks.com)
- MATLAB is an interactive, interpreted language that is designed for fast numerical matrix calculations

The MATLAB Environment

- MATLAB window components:

Workspace

- > Displays all the defined variables

Command Window

- > To execute commands in the MATLAB environment

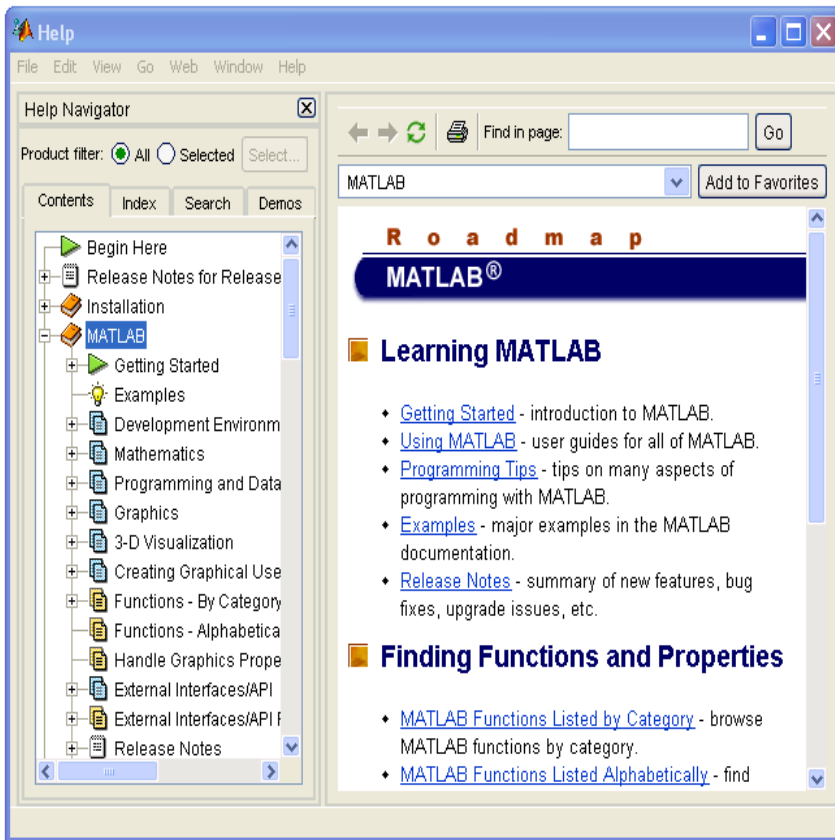

Command History

- > Displays record of the commands used

File Editor Window

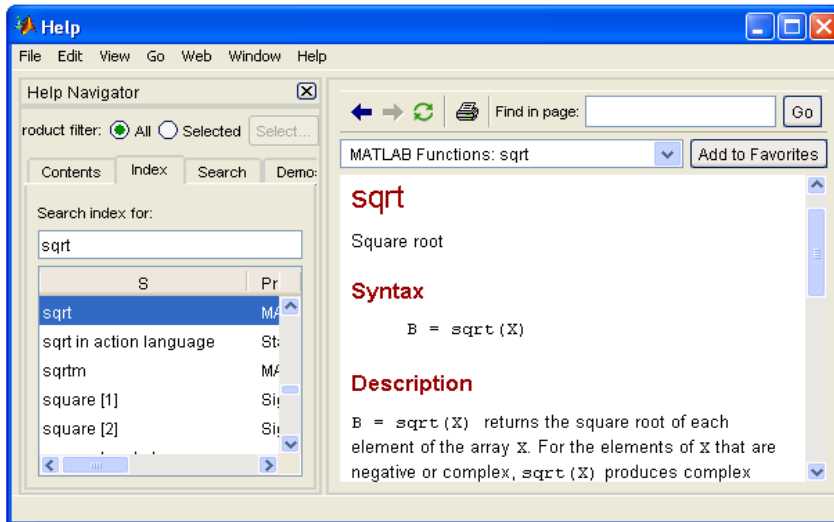

- > Define your functions

MATLAB Help

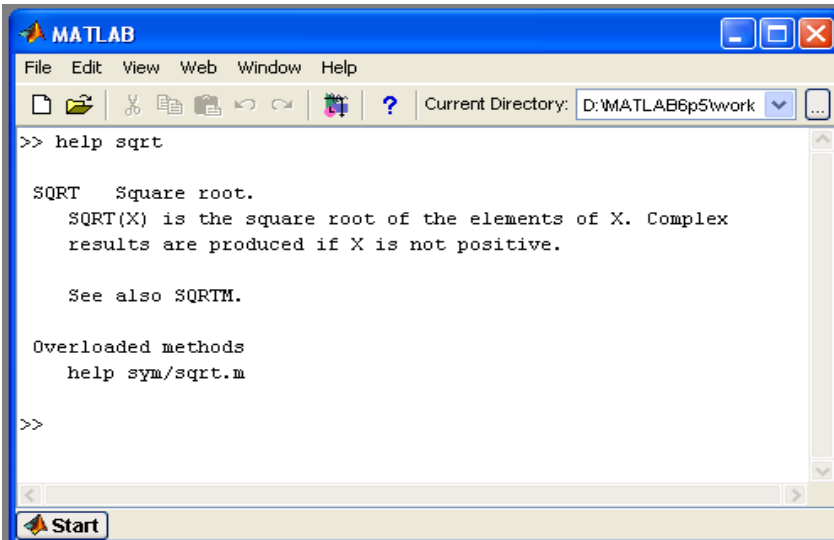

- MATLAB Help is an extremely powerful assistance to learning MATLAB
- Help not only contains the theoretical background, but also shows demos for implementation
- MATLAB Help can be opened by using the HELP pull-down menu

MATLAB Help (cont.)

- Any command description can be found by typing the command in the search field

- As shown above, the command to take square root (`sqrt`) is searched

- We can also utilize MATLAB Help from the command window as shown

More about the Workspace

- `who`, `whos` – current variables in the workspace
- `save` – save workspace variables to *.mat file
- `load` – load variables from *.mat file
- `clear` – clear workspace variables

- CODE

Matrices in MATLAB

- Matrix is the main MATLAB data type
- How to build a matrix?
 - `A=[1 2 3; 4 5 6; 7 8 9];`
 - Creates matrix A of size 3 x 3
- Special matrices:
 - `zeros(n,m)` , `ones(n,m)` , `eye(n,m)` ,
`rand()` , `randn()`

Basic Operations on Matrices

- All operators in MATLAB are defined on matrices: `+`, `-`, `*`, `/`, `^`, `sqrt`, `sin`, `cos`, etc.
- Element-wise operators defined with a preceding dot: `.*`, `./`, `.^`
- `size(A)` – size vector
- `sum(A)` – columns sums vector
- `sum(sum(A))` – sum of all the elements

- [CODE](#)

Variable Name in Matlab

- Variable naming rules
 - must be unique in the first 63 characters
 - must begin with a letter
 - may not contain blank spaces or other types of punctuation
 - may contain any combination of letters, digits, and underscores
 - are case-sensitive
 - should not use Matlab keyword
- Pre-defined variable names
 - pi

Logical Operators

- `==`, `<`, `>`, (not equal) `~=`, (not) `~`
- `find('condition')` – Returns indexes of A's elements that satisfy the condition

Logical Operators (cont.)

- Example:

```
>>A=[7 3 5; 6 2 1], Idx=find(A<4)
```

```
A=
```

```
7 3 5
```

```
6 2 1
```

```
Idx=
```

```
3
```

```
4
```

```
6
```

Flow Control

- MATLAB has five flow control constructs:
 - `if` statement
 - `switch` statement
 - `for` loop
 - `while` loop
 - `break` statement

if

- IF statement condition
 - The general form of the IF statement is

```
IF expression
  statements
ELSEIF expression
  statements
ELSE
  statements
END
```

switch

- SWITCH – Switch among several cases based on expression
- The general form of SWITCH statement is:

```
SWITCH switch_expr
  CASE case_expr,
    statement, ..., statement
  CASE {case_expr1, case_expr2, case_expr3, ...}
    statement, ..., statement
  ...
  OTHERWISE
    statement, ..., statement
END
```

switch (cont.)

- Note:
 - Only the statements between the matching `CASE` and the next `CASE`, `OTHERWISE`, or `END` are executed
 - Unlike `C`, the `SWITCH` statement does not fall through (so `BREAKS` are unnecessary)

for

- FOR repeats statements a specific number of times
- The general form of a FOR statement is:

```
FOR variable=expr
```

```
    statements
```

```
END
```

while

- WHILE repeats statements an indefinite number of times
- The general form of a WHILE statement is:

```
WHILE expression
```

```
    statements
```

```
END
```

Scripts and Functions

- There are two kinds of M-files:
 - Scripts, which do not accept input arguments or return output arguments. They operate on data in the workspace
 - Functions, which can accept input arguments and return output arguments. Internal variables are local to the function

Functions in MATLAB (cont.)

- Example:
 - A file called STAT.M:

```
function [mean, stdev]=stat(x)
%STAT Interesting statistics.
n=length(x);
mean=sum(x)/n;
stdev=sqrt(sum((x-mean).^2)/n);
```
 - Defines a new function called STAT that calculates the mean and standard deviation of a vector. Function name and file name should be the SAME!

Visualization and Graphics

- `plot(x, y), plot(x, sin(x))` – plot 1D function
- `figure, figure(k)` – open a new figure
- `hold on, hold off` – refreshing
- `axis([xmin xmax ymin ymax])` – change axes
- `title('figure titile')` – add title to figure
- `mesh(x_ax, y_ax, z_mat)` – view surface
- `contour(z_mat)` – view z as topo map
- `subplot(3, 1, 2)` – locate several plots in figure
- [CODE](#) and Debug CODE

Saving your Work

- `save mysession`
 % creates mysession.mat with all variables
- `save mysession a b`
 % save only variables a and b
- `clear all`
 % clear all variables
- `clear a b`
 % clear variables a and b
- `load mysession`
 % load session

Outline

- Introduction to MATLAB
 - Basics & Examples
- **Image Processing with MATLAB**
 - **Basics & Examples**

What is the Image Processing Toolbox?

- The Image Processing Toolbox is a collection of functions that extend the capabilities of the MATLAB's numeric computing environment. The toolbox supports a wide range of image processing operations, including:
 - Geometric operations
 - Neighborhood and block operations
 - Linear filtering and filter design
 - Transforms
 - Image analysis and enhancement
 - Binary image operations
 - Region of interest operations

Images in MATLAB

- MATLAB can import/export several image formats:
 - BMP (Microsoft Windows Bitmap)
 - GIF (Graphics Interchange Files)
 - HDF (Hierarchical Data Format)
 - JPEG (Joint Photographic Experts Group)
 - PCX (Paintbrush)
 - PNG (Portable Network Graphics)
 - TIFF (Tagged Image File Format)
 - XWD (X Window Dump)
 - raw-data and other types of image data
- Data types in MATLAB
 - Double (64-bit double-precision floating point)
 - Single (32-bit single-precision floating point)
 - Int32 (32-bit signed integer)
 - Int16 (16-bit signed integer)
 - Int8 (8-bit signed integer)
 - Uint32 (32-bit unsigned integer)
 - Uint16 (16-bit unsigned integer)
 - Uint8 (8-bit unsigned integer)

Images in MATLAB

- Binary images : $\{0,1\}$
- Intensity images : $[0,1]$ or `uint8`, `double` etc.
- RGB images : $m \times n \times 3$
- Multidimensional images: $m \times n \times p$ (p is the number of layers)

0.2251	0.2563	
0.5342	0.2051	0.2157
0.5342	0.1789	0.1307
0.4308	0.2483	0.2624
0.3344	0.2624	

0.2235	0.1294	Blue	0.4196

0.5804	0.0627	0.0627	0.0627	0.2235
0.5176	0.1922	0.0627	Green	0.1922
0.5176	0.1294	0.1608	0.1294	0.2588
0.5176	0.1608	0.0627	0.1608	0.1922
0.5490	0.2235	0.5490	Red	0.7412
0.5490	0.3882	0.5176	0.5804	0.5804
0.490	0.2588	0.2902	0.2588	0.2235
0.2235	0.1608	0.2588	0.2588	0.1608
0.2588	0.1608	0.2588	0.2588	0.2588

Image Import and Export

- Read and write images in Matlab

```
img = imread('apple.jpg');  
dim = size(img);  
figure;  
imshow(img);  
imwrite(img, 'output.bmp', 'bmp');
```

- **Alternatives to imshow**

```
imagesc(I)
```

```
imtool(I)
```

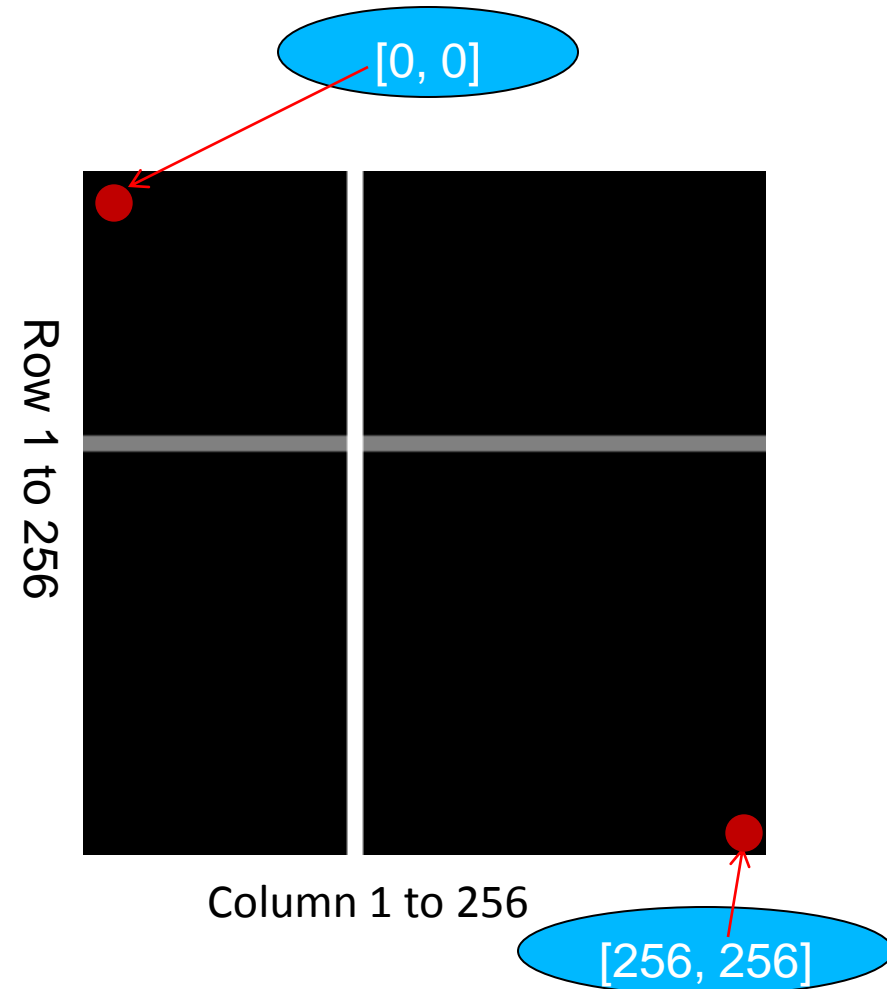

```
image(I)
```

Images and Matrices

**How to build a matrix
(or image)?**

Intensity Image:

```
row = 256;  
col = 256;  
img = zeros(row, col);  
img(100:105, :) = 0.5;  
img(:, 100:105) = 1;  
figure;  
imshow(img);
```

Images and Matrices

Binary Image:

```
row = 256;  
col = 256;  
img = rand(row,  
col);  
img = round(img);  
figure;  
imshow(img);
```

Image Display

- `image` - create and display image object
- `imagesc` - scale and display as image
- `imshow` - display image
- `colorbar` - display colorbar
- `getimage` - get image data from axes
- `truesize` - adjust display size of image
- `zoom` - zoom in and zoom out of 2D plot

Image Conversion

- `gray2ind` - intensity image to index image
- `im2bw` - image to binary
- `im2double` - image to double precision
- `im2uint8` - image to 8-bit unsigned integers
- `im2uint16` - image to 16-bit unsigned integers
- `ind2gray` - indexed image to intensity image
- `mat2gray` - matrix to intensity image
- `rgb2gray` - RGB image to grayscale
- `rgb2ind` - RGB image to indexed image

Image Operations

- RGB image to gray image
- Image resize
- Image crop
- Image rotate
- Image histogram
- Image histogram equalization
- Image DCT/IDCT
- Convolution

Examples working with Images (11 different examples)

<https://www.youtube.com/watch?v=GnD4Z3JvyNk&list=PL9ADE09052E08CC57>

Performance Issues

- The idea: MATLAB is
 - very fast on vector and matrix operations
 - Correspondingly slow with loops
 - Try to avoid loops
 - Try to vectorize your code
- <http://www.mathworks.com/support/tech-notes/1100/1109.html>

Vectorize Loops

- Example

- Given image matrices, A and B, of the same size (540*380), blend these two images

```
apple = imread('apple.jpg');  
orange = imread('orange.jpg');
```

- Poor Style

```
% measure performance using stopwatch timer  
  
tic  
for i = 1 : size(apple, 1)  
    for j = 1 : size(apple, 2)  
        for k = 1 : size(apple, 3)  
            output(i, j, k) = (apple(i, j, k) + orange(i, j, k))/2;  
        end  
    end  
end  
end  
toc
```

- Elapsed time is [0.138116](#) seconds

Vectorize Loops (cont.)

- **Example**

- Given image matrices, A and B, of the same size (600*400), blend these two images

```
apple = imread('apple.jpg');  
orange = imread('orange.jpg');
```

- **Better Style**

```
tic % measure performance using stopwatch timer  
Output = (apple + orange)/2;  
toc
```

- Elapsed time is 0.099802 seconds

- **Computation is faster!**

THE END

- Thanks for your attention! 😊
- Questions?
