

# Giulio Manzonetto

## *FSCD Steering Committee Election, 2022*

### Short Bio

Since 2011, I am Assistant Professor (*maître de conférences*) in Paris at the University Sorbonne Paris Nord, where I work as a member of the Logic and Verification team of the Computer Science lab. The research topic I carry in my heart is untyped  $\lambda$ -calculus, that I study both from a syntactic and from a semantic perspective using techniques arising from linear logic, recursion theory, universal algebra, topology and category theory. More generally, my scientific interests include denotational semantics of programming languages, term rewriting systems, algebraic logic, type assignment systems and normalization proof techniques. My research achievements are generally appreciated at an international level: I am the recipient the “Paolo Gentilini Award 2020 for Mathematical Logic and its Applications to Computer science” (from AILA <http://www.ailalogica.it>) and my POPL20 paper, jointly written with my PhD student Barbarossa, received the Distinguished Paper Award. I was a PC member of FoSSaCS 2021, MFCS 2021, TLLA 2019 and served as general chair of the Microservices Conference 2022. I am regularly involved in the organisation of international conferences, like Computability in Europe 2016, and served as Workshops Chair of IJCAR-FSCD 2020.

### Election Statement

I attended several editions of TLCA / RTA / RDP and I am a fairly regular attendee of FSCD, since its creation. I consider the variety of topics spanned by the associated workshops very enriching and stimulating from a scientific point of view. Not only I enjoy the ambience and the contents of the scientific talks, but I really feel part of this community, as witnessed by my involvement with the event organization in Paris.

If elected, I will continue the mission of making FSCD and its workshops internationally renowned, attractive, well-organized and open to new subjects possibly arising in our field. My opinion concerning the acceptance policy of FSCD is that it should be primarily driven by the quality of the papers, rather than numerical considerations. I also think that we it would be interesting to have regular “Best paper award” and “Best presentation award”, in addition to the already existing award for the “Best student paper”.
